

FIRST AID CENTER - MVP

Proposed by
Hanadi Alshahrani

October 5, 2021

MVP GOAL

The project's goal is to show the crowded stations of New York City in order to put a first aid center in it.

To start exploring this goal, I used a Bar Chart model to describe the number of passengers generated over a three-month period at each station.

The drawn bar shows the number of passengers at each station, and the number of passengers increases with the darkening of the bar.

This result indicates that the presence of a first aid center may have a positive effect on passengers in reducing congestion resulting from injuries.
